p. 447-451.

DESCRIPTORS: Friction, *Machine tools, *Tool steel,
Metal forming presses, Life expectancy, Ceramic
materials, Tools.

It is stressed that the knowledge of wear phenomena in
metal working is becoming increasingly important.
With tool steel and high speed steel, a clear criterion
can be given without reference to the course of wear;
with hard metal and the choice of definitely permissi-
ble wear values. With ceramic material there is a
similar problem. (Author)
